

Patient readmissions have led to over \$41 billion yearly in additional hospital costs, affecting hospitals and patients alike.

My advanced analytics engine works continuously to sense vulnerable patients and other risk situations, and identifies targets to help you maximize your impact, while taking into account the limits of cost-intensive intervention strategies.

I am flexible, always learning and adjusting to your unique context. When you've chosen a strategy, I give you a concrete plan to follow through with it, benefiting both patients and healthcare providers.

Here are the latest opportunities I've sensed
